## GREEN REAPER

Green Reaper is an extremely fast acting, non-selective weed killer. It is a 100% organic product based on coconut fatty acids and sugars. As Green Reaper is completely non-toxic, non-hazardous, highly biodegradable and based on naturally renewable resources its environmental profile unsurpassed in the herbicide market.

### FEATURES:

- **CONTACT**—will only kill that which it contacts. You can safely spray around vegetables, fruit and ornamentals if care is used to avoid contacting the desirable foliage.
- **SPEED**—starts killing immediately. The effects noticeable within minutes and the once thriving weed is reduced to brown skeleton within as little as 2 hours (not weeks). This allows identification of missed areas for re-spotting.
- **No residue**—treated areas can be immediately replanted. No withholding time for fruit and vegetables. Concrete, bricks and paint work are not suitable.
- **Cat, DOG, BUGIE and CHILDREN SAFE**—Green Reaper is non-toxic to mammals and bees.
- **BROAD SPECTRUM**—will kill most weeds if the foliage is thoroughly coated. For stubborn weeds decrease the dilution.

### METHOD OF USE:

- Dilute 1 part Green Reaper with 14 parts water (i.e. 500ml makes 7 litres ready to use). For difficult perennials, very waxy leaves and kikuyu dilute 1:10.
- Shake lightly to mix.
- Spray onto weed foliage to thoroughly wet green surface.
- A second application a week later will finish off any remains that were not thoroughly covered.

### AREA OF USE:

\* Total control of vegetables seed beds prior to emergences of desirable plants.

\*Mowing strips along driveways and paths. Mowing circles around established trees and poles.

\*Building Maintenance—controlling moss, mould and lichen.

\*Targeted weed control in potted plants, rockeries.

\* Control of weeds in established garden by targeted spraying.

\*Weed control between bricks, pavers and cobbles.

\*Defining areas on playgrounds and sports fields.

**STORAGE:** KEEP IN DRY AND WARM AREA ( ABOVE 10 DEGREES CELSIUS)
